

In order for us to be able to deliver your hot tub a clearance of about of 80cm from our delivery vehicle to the installation area is required. Also a height of a little over 2M is required for the rigid hot tubs. Please ensure that any archways leading to your garden give sufficient clearance.

A flat level area of about 2M square is required to locate you hot tub. This can be grass, concrete or your decking.

Electricity

Each hot tub comes with a single standard 13amp plug with an RCD breaker for additional safety. The power supply can either be an indoor or outdoor socket.

Water

In order to fill your hot tub with water, we will require access to a tap. We provide all the necessary hoses and connections. Should you wish to use the hot tub that evening we would recommend using your indoor hot water tap so that the heating process can be accelerated.
